Education

National Taiwan University

Masters of Management in Information Management

Taipei, Taiwan

Expected to graduate in June 2027

National Taiwan University

Bachelors of Management in Information Management, GPA: 3.62/4.3

Taipei, Taiwan

Graduated September 2025

- **Related coursework:** Generative Artificial Intelligence, Reinforcement Learning, Computer Vision, Applied Deep Learning, Statistical Learning, Advanced Deep Learning, Parallel and Distributed Programming, Multimodal Human-Computer Interaction

Experience

AMD

Machine Learning Engineer Intern

Taipei, Taiwan

June 2026 – August 2026

- Led the end-to-end development of an automated PCB schematic review tool, including data collection, cleaning, evaluation, and deployment. Developed a hybrid rule-based and ReAct Agent classifier for schematic design-rule validation, achieving 90% accuracy and 85% recall across 30 internal SP7 Venice server motherboard designs from hyperscalers, OEM and ODM clients including Amazon, Microsoft, Oracle and Dell.
- Established DevOps pipelines for two internal applications using Docker, Helm, GitHub Actions, and Argo CD, deploying both applications to an internal Kubernetes cluster.
- Served as an individual contributor on the AMD CEAI team, collaborated with product owners, hardware engineers, and software engineers across Taiwan and North America to define requirements, plan development milestones, and deliver the project on schedule.

Quid

Machine Learning Engineer Intern

Taipei, Taiwan

September 2024 – June 2026

- Owned an LLM-based NLP module within Quid Monitor's document processing pipeline, an enterprise social listening SaaS platform. Delivered features such as irrelevant-document filtering, aspect-based sentiment analysis, and emoji detection, improving precision and coverage over the legacy system in multilingual settings while scaling throughput to 1 million documents in under 6 hours using both in-house and third-party model serving solutions.
- Served as an individual contributor on the AI Platform team, working closely with backend and search engineering teams to deliver projects on schedule and with account managers and project managers to improve output quality for enterprise customers, including Publicis, Disney Parks, Taco Bell and Delta Air Lines.
- Implement new features into the in-house LLM platform, including gateway, efficient inference client, self-hosting service, fine-tuning service and quantization service.
- Designed and implemented an evaluation pipeline to benchmark state-of-the-art LLMs across six internal NLP tasks, accelerating adoption of newer models by the Quid Monitor and Quid Connect teams in two internal use cases.

NTU MiRA Lab

College Research Intern, under Prof. Winston H. Hsu

Taipei, Taiwan

September 2024 – May 2025

- Received 2025 CVPR Embodied AI Workshop - HAZARD Challenge 2nd Place
- Research Topic: Development of a Safe Vision-Language Action Model Using Constrained Reinforcement Learning Techniques.
- Conducted surveys on state-of-the-art research papers.

Instill AI

AI Software Engineer Intern

London, UK

June 2024 – August 2024

- Developed scalable ETL pipeline components with Golang for different AI vendors.
- Gained international work experience through NTU's Overseas Internship Program.

Technical Skills

Languages: Python, C/C++, JavaScript, Golang, Bash, L^AT_EX

Machine Learning Frameworks: PyTorch, OpenCV, Transformer, numpy, pandas, scikit-learn, MLflow, vLLM, DSPy.

Cloud Native Frameworks: Docker, Kubernetes, Helm, Argo Workflows, Prometheus, Grafana.
